

Home Unite Us (HomeUnite.us)

HomeUnite.us is a workflow management tool to support community non-profits offering Host Home matching programs. HomeUnite.us is built to automate repetitive tasks, reduce unintentional bias, and deliver data-driven insights on users and processes. This allows non-profits to focus on expanding their impact within their served communities.

Recent Progress:

The HomeUnite.us team is developing a pilot for our stakeholders by:

- Designing an application workflow for guests, hosts and coordinators
- Designing digital profiles for guests, hosts and coordinators
- Integrating a calendaring system to reduce friction in making appointments with program coordinators
- Implementing matching algorithms based on eligibility factors like smoking, pet ownership, and alcohol/substance use to match guests with hosts
- Designing hi-fidelity prototypes for guests and hosts' dashboards
- Wireframing the dashboard for program coordinators to manage matches and track pending items
- Creating backend technical groundwork for pilot features

Q1 & Q2 Roadmap

- Complete development of:
 - Application workflow and digital profiles
 - Dashboards for guests, hosts, and program coordinators
- Present pilot plan for stakeholders to gain buy-in and clarify pending assumptions
- Crystalize feature scope for pilot
- Finalize launch plan and success metrics
- Develop and implement fundraising strategy to increase adoption
